

Assignment 8

Solutions

1)

No, the Python standard library does not include PyInputPlus. It is a 3rd party module.

2)

The PyInputPlus module can be imported with any name that we want. Commonly it is imported as `pypi` to make it shorter.

3)

The difference between the `inputInt()` and `inputFloat()` functions is that `inputInt()` returns integer value and `inputFloat()` returns float value.

4)

We can code `pypi.inputInt(min=0,max=99)`

5)

List of regex strings is transferred to the keyword arguments `allowRegexes` and `blockRegexes`

6)

If a blank input is entered three times, `inputStr(limit=3)` will raise `RetryLimitException` error

7)

If a blank input is entered three times, `inputStr(limit=3,default = 'hello')` will return 'hello'
